

CLEVE L. ABBOTT MEMORIAL ALUMNI STADIUM AUDIO SYSTEM RENOVATION PROJECT

As it exists today, the stadium audio is provided by 5 Galaxy speakers placed on the outside of the press box. The system is powered by a QSC CX254 Amplifier and mixed with a TOA 900 Series Mixer/Amp.

Wireless Mics are provided with 2 MIPRO WR-222 receivers/Mics and 2 Shure wireless Mic systems. One Announcer mic is in place for the Game Announcer.

The Audio Field Dimensions are detailed and necessary coverage is approximately 480,000 square feet. They estimate that at their peak attendance, they may have up to 20,000 fans present in seating and around on the surrounding grounds.

Displayed with a Google Earth Underlay, this is the area of coverage. One thing not seen on the single dimensional photos is the fact that the field is in a bowl. It actually has approximately a 20 foot drop from the grassy area down to the track surrounding the football field.

Project Scope:

Evaluate the existing sound field and sound system.

Make recommendations for improvements and provide details, estimates, and services to implement the improvements.
